

How to Help Your Child Enjoy Math

- **Help your child use math every day**
- **Play family games that involve math**

Make everyday tasks into games:

- Take your student grocery shopping and challenge them to add prices in their heads.
- Challenge your child to find which brand or size of a product is the best value.
- Make sure the tasks are not too hard for the child.
- Balancing a bank checkbook
- Make up time problems (how long does it take to ...?)
- Count how many steps to the car, or stairs on a walk
- Notice the street numbers as you drive along
- Allow student to buy one grocery item for the family and tell you the amount of the change.

Playing Math Games

- Family game time creates a bonding time and a fun, comfortable atmosphere for your child to improve their math skills.
- Popular games that use math and logic include Yatzee, chess, backgammon, checkers, Connect Four, and dominoes as well as math games that come home from school.
- Children will participate in these games because they are fun and will make their homework easier.

Have fun with your student! Fun means learning when it comes to MATH!
